

Drop-In Worksheet

Use this worksheet to help calculate quantities of Drop-In Panels which are ready to be dropped into a 24" x 24" metal grid ceiling.

1. Check panel size: _____ 24" x 24"

2. Calculate the total number of iSky Star Panels to properly cover your design
see Designs in this Guide if you need ideas.

_____ number of iSky star panels (2300)

_____ number of standard panels (2301)

NOTE: Use these panels without "stars" as filler in the rest of the ceiling - same matte black or white color and finish as star ceiling panels

NOTE: iSky also offers black ceiling grid for color matching

3. Count the Number of Drivers: (50 Panels per Driver)

1 = 1 - 50 panels; 2 = 51- 100 panels; 3 = 101- 150 panels...and so on

_____ number of Drivers (7030)

4. Each remotely located Driver will require a Leader Cable

_____ # of 12 inch Cables (7114)

_____ # of 30 foot Cables (7131)

NOTE: Each panel comes with Jumper Cable, a pair of latex gloves and installation instructions. We suggest purchasing a few extra Jumper Cables for unforeseen obstacles.
