New Reveal Edge star ceiling panel gets a face-lift, which provides an edge over the standard Drop-In ceiling panel

September 9, 2009, **Chicago, IL** – Design and build fiberoptic and LED lighting firm, Fiberoptic Studio Corp., (FSC) parent company of iSky Panel Systems, Inc., (iSky) introduces a new product for use in Home Theaters, hospitality and health care venues.

The new Reveal Edge detail gives star ceiling systems that designed look architects and design professionals have been looking for. The Reveal Edge feature drops the face of the panel below the metal “T” grid that holds the panels. This product brings together the low-voltage design flexibility of traditional fiberoptic systems with the energy efficient, ultra long life and super bright, “pure” colors of LED’s, digital technology, and acoustic treatment. Homeowners and professionals will recognize the difference in the new design immediately – not only do they look better, but are more realistic, and the LED’s 50,000-hour lamp life means the systems are not only extremely energy efficient, but also virtually maintenance free all with the added benefit of sound absorption.

This easy to install, hybrid LED and Fiberoptic Star Ceiling system for Home Theaters, Children’s Healthcare, and other environments, was established under the product name iSky. In 2007 and 2008, iSky received the “Best Product of the Year” from Electronic House. In 2007 iSky received the Excite Custom Retailers “Excellence in Custom Installation Products” award, and Residential Systems award for “Best Custom Installation Accessory”. In 2009, iSky continues to add new offerings to its product line with such as warm white and color changing RGB uRay TAPE Lighting.

Other new product offerings for 4th quarter 2009 include: iSky’s new “Green” EcoTech™ star panel which uses Auralex’s™ new 1” Black EcoTech™ sound absorbing panel and builds iSky’s star ceiling technology right into this 24” x 24” x 1” recycled (and recyclable) acoustic absorber panel. Also new this quarter is the addition of a Reflector and Diffuser panel to complement the full line of iSky Surface Mount panels. Drop-In panels get a face-lift too with the addition of vinyl faced panels. These panels offer a “sand like” texture and are available in Black or White. Both colors are available in the standard Drop-In style, or with the new Reveal Edge. iSky is also offering black painted Ceiling available in 8’ lengths and shippable via UPS.

Jeff Graham, President of Fiberoptic Studio Corp tells me “Reveal Edge is a major step up in esthetics. It has a beautiful finish, and the new white colored panel is perfect for any healthcare environment including dentist offices and children’s areas in libraries and hospitals. We know that CEDIA members are marketing to new niche markets such as dentist offices, and iSky’s products can simply offer the dealer one more layer of effects to promote a ‘positive distraction’ in such spaces.”

In 2007, FSC moved to emphasize another area of the business, custom and standard fiber optic chandeliers. Fiberoptic Studio Chandeliers and Curtain Walls use an ambient lighting technique that creates a pleasant and “entertaining” effect within its environment. Lighting that creates a “positive distraction” is a light source that attracts attention, and sets a deliberate tone in the space.

Because of their versatile design, low maintenance, low energy requirements, and benign light output, Fiberoptic Studio Chandeliers and Curtain Walls are the ideal light-source for creating a designed look in any number of applications including sophisticated residences, nightclubs, healthcare and hospitality venues, such as ballrooms, grand staircases, and casinos.

Today FSC is recognized as a pioneer in the industry and has over 23 years building a solid reputation for designing breakthrough applications. FSC’s latest product developments include the innovative iSky hybrid Star Ceiling system for use in Residential Commercial, Hospitality, Healthcare and Home Theater Applications, and Chandeliers/Curtain Walls for those same settings.

The Fiberoptic Studio team prides themselves not only in keeping one step ahead of the latest product developments available to the market, but also combining these technologies in innovative ways to create the unique, high impact visual creations their customers have grown to expect.

“These Systems are not like the traditional lighting fixtures you go to the store and purchase and simply install. These systems can be quite complex. Because of their complexity it takes a specialist that can offer a truly turnkey out of the box, plug and play solution, and that’s what iSky is all about. Making these systems for specialist who can specify, purchase, and install the system correctly and with ease.”
